GE ULTRA System

Before

After

“When we switched to new GE T8 Watt-Miser® lamps and ULTRA ballasts, we saved energy while creating a more cheerful environment for both our residents and prospects. This give us a real advantage in the marketplace.”

Providers Choice Mgmt. Service

Nursing home operator switches to new GE ULTRA System, saves energy, creates competitive advantage in marketplace.

The Arlington Nursing Home is a 200 bed, skilled nursing facility serving the residents of Newark, Ohio and the surrounding communities.

“Providing a quality setting in this competitive marketplace, is very challenging,” said Roger King, President of Providers Choice Management Services, management consultants for Arlington and President of the Ohio Academy of Nursing Homes. “One of the things we strive for is to make the environment as cheerful as possible for the residents, their families and other visitors to the 25 year-old facility.”

“So when our professional energy management services firm, National Energy Services Company, Inc., presented us with a proposal to replace all existing 40-watt fluorescent lamps and ballasts with new 30-watt GE Watt Miser® lamps and ULTRA ballasts, we were very interested.”

The new GE ULTRA system reduced energy use an estimated 25 percent, offered better color rendering, as well as 94 percent lumen maintenance over the life of the lamp.

“The GE lamps create a brighter, more natural environment,” King noted. “We’ve received positive feedback from both our residents and from the people who visit Arlington to evaluate it as a new residence for someone. We’ve been so impressed with the results with the new lighting, both energy savings and the ‘cheerful’ new environment that we’ve also relamped 10 more facilities with the same energy saving GE lamps.”
